PROFESSIONAL SUMMARY

Unity Game Developer (4+ years) specializing in mobile performance optimization, end-to-end iOS porting, and multiplayer systems, with hands-on experience building AI-agent-driven workflows via Unity MCP. Cut draw calls ~5x (450→90 on some titles), shipped multiple Android titles to the App Store, and released an original FPS. Strong in profiling-led optimization, Photon/PlayFab networking, and clean C# architecture — holding crash rates under 1% and cutting ANR from 0.45% to 0.24%.

EXPERIENCE

2021 — PRESENT

Terafort

Unity Game Developer

- › Built a working Unity MCP integration connecting the live project to AI agents for editor automation (asset ops, scene edits, scripted tasks), cutting repetitive manual dev work.
- › Cut draw calls/batches across titles from ~450 to ~200 (as low as ~90 on some) by combining meshes, atlasing textures, and tuning the far clip plane — profiled on-device with Graphy; reduced memory on low-end Android (2–3GB) via asset/texture compression, eliminating OOM crashes.
- › Engineered Photon PUN multiplayer — matchmaking, session/room creation, and RPC-based state sync across clients.
- › Ported multiple Android titles to iOS end-to-end — resolving platform-specific build and runtime issues, handling code signing, and managing full App Store submission and release.
- › Cut ANR from ~0.45% to ~0.24% (crash rate <1%) by moving ad loads and scene loading off the main thread and pooling to kill runtime instantiation spikes; integrated AdMob, Unity Ads, AppLovin.

2020 — 2021

ZMectr

System Engineer

- › Designed and deployed IoT systems at 99% uptime; cut production incidents 25% through proactive monitoring and root-cause analysis.

SELECTED PROJECTS

Commando Shooting Stars (Original · Shipped)

- › Solo-built and shipped an original FPS to real users — combat, upgrade mechanics, and loot systems end to end.
- › Architected the Firebase backend for player data, persistence, and live config.

Rider 3D

- › Engineered UI systems, upgrade mechanics, and an offline economy.
- › Maintained crash rate below 1% across releases.

Prado Parking (50M+ Downloads)

- › Optimized runtime performance and reduced ANR to ~0.24%.
- › Improved retention through gameplay polish and stability fixes.

SKILLS

CORE Unity (C#) · C++ / JS / Python · Performance Optimization · Multiplayer (Photon, PlayFab)

TECHNICAL Firebase · iOS Porting & App Store Release · Monetization (AdMob, Unity Ads, AppLovin)

PLATFORMS Android · iOS · tvOS · Android TV · Playable Ads (Unity Playworks)

TOOLS Git / Bitbucket · Agile · Unity Profiler · Graphy · Xcode

AI-ASSISTED Unity MCP + AI Agent Integration · Cursor · Claude · ChatGPT

EDUCATION

B.Sc. Computer Science Northern University Nowshera · 2017 – 2021
